

# Tomorrows Packaging using Today's Waste

**Established in 1979, Bell Packaging has grown to be the world's largest manufacturer of Jetran® Packaging and auxiliary products. Our unique processes allow us to create packaging solutions for your products in PVC, PET and PP.**

Our continual investment in both our staff and machinery ensures we can deliver a quality product at a cost effective price - all within agreed lead-times.

For customers seeking International branding we have design and manufacturing facilities to supply Jetran® PET and PP Packaging in ASIA and USA through Bell Packaging PVT Limited operated by Globe Print n Pack in Mumbai, and in New York by the SLM Corporation.

#### RETRAN®

Retran® is our new product taken from the Jetran® stable, manufactured from material containing post consumer waste.

#### IN-HOUSE DESIGN

We know how important it is to present concepts that are both innovative and cost effective, and we are able to do this through our in-house design centre.

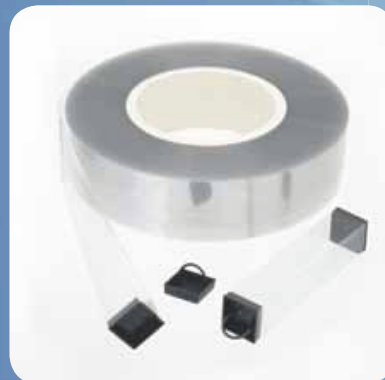

We also understand that speed of sampling is essential so we aim to supply all plain samples within 48 hours of brief.

Using a mix of CAD cam and more traditional methods we can create anything from a simple, one-off sample to multiples needed for your transit trials and sales force.

**1. Retran® is made from consumer waste**

**2. It is turned into clear plastic reels and can be cut to a length to suit your products**

**3. We can also manufacture shapes including square, rectangular, circular, oval, hexagonal and triangular**

**4. The finished pack**
